

Xiangfeng Zhu

CONTACT INFORMATION	3510 Murdoch Dr. Palo Alto, CA 94306 xzhu27.me	650-660-0918 zxfeng@umich.edu www.linkedin.com/in/xzhu
RESEARCH INTERESTS	Networking, Cloud Computing, Distributed Systems	
EDUCATION	University of Michigan, Ann Arbor B.S., Computer Science <ul style="list-style-type: none">GPA: -/4.00 Univeristy of California, Santa Cruz B.S., Computer Science <ul style="list-style-type: none">GPA: 3.94/4.00	Sep. 2018 - now Sep. 2016 - June. 2018
RESEARCH EXPERIENCE	Undergraduate Researcher Disorderly Lab, UCSC Advisor: Prof. Peter Alvaro <i>Protocol Repair Using Lineage Graphs</i> <ul style="list-style-type: none">Developed a debugging approach based on analysis of provenance data obtained during system executions equipped with correctness specifications. Our approaches require programs and their correctness properties written in a high-level declarative language.Helped Design a standalone prototype Debugger Nemo and validated Nemo on protocols from real-world distributed bugs. Our experimental result shows that Nemo demonstrates the promise of automatic provenance-guided debugging for complex distributed protocols. Undergraduate Researcher Computer Communication Research Group, UCSC Advisor: Prof. J.J. Garcia-Luna-Aceves <i>CUP: Channel-Utilization Persistence for MAC protocols</i> <ul style="list-style-type: none">Helped Professor J.J. design the first transmission strategy(CUP) for contention-based MAC protocols. This approach applies to any MAC protocols with carrier sensing, virtual carrier sensing, or priority acknowledgments.Analyzed the efficiency of Channel-Utilization Persistence MAC protocols, such as CUP-CSMA and CUP-CSMA/CA, using Markov Chains. Presented numerical results that compare the throughput of CUP-CSMA, non-persistent CSMA, and 1-persistent CSMA. Undergraduate Researcher Storage System Research Center, UCSC Advisor: Prof. Darrell D. E. Long <i>Rogue Cell tower(IMSI Catcher) detector</i> <ul style="list-style-type: none">Wrote a design document with three lab partners detailing the project and future work. Our approach includes Neighboring Cell Tower Information, Absence of Encryption and Signal Strength.Designed an algorithm to pinpoint the location of IMSI Catchers based on received signal strength (RSS)	Mar. 2018 - Now Aug. 2017 - Feb. 2018 Mar. 2017 - Aug. 2017

- Wrote C code to communicate with a SIMCOM module via AT commands and a GPS module

PROJECTS	<p>Fault-tolerant Scalable Key-Value Store 2017</p> <ul style="list-style-type: none"> • Developed a distributed, fault-tolerant key-value store that can store the amount of data that cannot fit into one single machine, using consistent hashing. <p>Chess Puzzle Solver 2017</p> <ul style="list-style-type: none"> • Wrote a program that can determine if a player can force checkmate in up to 5 steps, including the moves of the opponent. <p>Online Reservation system 2017</p> <ul style="list-style-type: none"> • Designed an online reservation app for Manyue Yoga Stadium, on-line payment system, and on-line community for member to share their experience.
EXPERIENCE	<ul style="list-style-type: none"> • CMPE107: Probability and Statistics , UCSC, Grader Spring 2018 • CMPS12B: Introduction to Data Structures, UCSC, Tutor Spring 2018 • CMPS12B: Introduction to Data Structures, UCSC, Lab Tutor Winter 2018 • CMPS101: Algorithms and Abstract Data Types, UCSC, Tutor Fall 2017 • CMPS101: Algorithms and Abstract Data Types, UCSC, Grader Fall 2017
AWARDS	<ul style="list-style-type: none"> • Dean's Honor List: Fall 2016, Winter 2017, Spring 2017, Winter 2018, Spring 2018
SKILLS	<p>Programming: C, C++, Shell Scripting, Python, Java, Matlab, Bash</p> <p>Tools: Git, L^AT_EX, Vim, Neo4j, Docker</p>
